HUNTING FOR SECURITY: CHANGES IN THE EXPLOITATION ...

North American wildlife exploitation, as exemplified in the seabird and seaduck hunts of Newfoundland and Labrador, was a basic means of food security in coastal communities. Patterns of need and exploitation changed radically since the arrival of Europeans who perceived abundant and inexhaustible wildlife populations. These perspectives often

Wildlife Conservation and Management in Mexico

management of North American wildlife and the world's biodiversity. For example, it is an important wintering area and migratory corridor for temperate North American nesting birds. Fifty-one percent of the bird species of the USA and Canada spend 6-9 months a year in Mexico (McNeely et al 1990). It also
